

# Vaccine hesitancy – fireside chat

September 2025

## Background

Pull up a chair and join us for an informal fireside chat bringing together health and social care professionals to explore a key topic in depth. We'll share our research findings, exchange insights, and reflect on how our collective knowledge can strengthen practice and improve outcomes.

## Vaccine hesitancy

We undertook 3 research projects looking into the uptake of the COVID-19 vaccine booster in older racially minoritised communities and the flu vaccine for care home workers. In September 2025, we held a fireside chat event bringing together professionals from the health sector keen to hear the insights we had to share based on people's experiences and thoughts regarding vaccinations .

## What people say

Most people described the event as very good and were very likely to recommend it to a colleague.

"Really interesting session, thanks again to you and your team."
